

About Base Activity from Material IO – April 2023

1. Base Activity came with two Fragments, FAB and SnackBar, Navigation Graph to go and back to Fragments First and Second
2. onDestroyView() → allows the fragment to clean up resources associated with its View.
 - a. Fragment Life Cycle methods:
<https://developer.android.com/reference/android/app/Fragment>
3. One layout can include other layout. Easy to reuse across multiple layouts.
 - a. `<include layout="@layout/content_main" />`
4. Customizing the AppBarLayout
 - a. AppBarLayout is a vertical LinearLayout which implements many of the features of material designs app bar concept, namely scrolling gestures.
 - b. Toolbar supports a more focused feature set than ActionBar which includes
 - i. Navigation Arrow
 - ii. Title
 - iii. Menus
5. Navigation graph will be discussed in the Chapter 10 JetPack Components
